

Fashion Freelancing

A step-by-step run through the whole product, written for someone who has never seen it before. You will create a freelancer, approve them, hire them as a company, and accept the job — then check everything else.

No technical knowledge needed. Roughly 30–40 minutes.

What this site is

Fashion Freelancing sells ten fashion-production services directly to brands. Alongside that, it runs a small, hand-checked network of freelance specialists. A company can either enquire about a service, or hire a named specialist from the network.

There are three kinds of people in the system, and you will play all three:

WHO	WHAT THEY DO
Freelancer	Applies to join, fills in a profile, waits to be approved, then receives work.
Admin	Reads applications and decides who gets in. Also handles enquiries and moderation.
Company	Browses approved specialists, asks one to work with them, or posts a project.

Before you start

The website

`https://fashion-freelancing.nathianand10.workers.dev`

The admin login

You will need this in Part 2 to approve the freelancer you create.

Email	<code>admin@fashionfreelancing.com</code>
-------	---

Password	<code>ff-admin-review-2026</code>
----------	-----------------------------------

Your test data is private to you

The site gives every browser its own private sandbox. Everything you create — freelancers, companies, projects — is visible only to you. Other testers cannot see your data, and you cannot see theirs. Use any email addresses you like; they do not need to be real, and someone else can use the same address in their own sandbox without a clash.

Two things that look broken but are not

- **The specialist directory starts empty.** Since you only see your own data, there is nobody there until you create a freelancer and approve them. That is Parts 1 and 2 of this guide.
- **No real emails are sent.** The site has no email provider connected. Anything it would have emailed — confirmation links, password resets — is listed instead under **Queued email** on the admin page.

How to switch between the three people

Use one browser and one tab. To become someone else, click **Sign out** (top right of any workspace page), then sign in as the next person. Signing out does *not* wipe your sandbox — everything you made is still there when you sign back in. This is the intended way to test, and it is what the rest of this guide assumes.

Part 1 · Create a freelancer

YOU ARE THE FREELANCER

A seven-step application. Your progress is saved as you go, so you can stop and come back. If you get something wrong, the error appears next to that field and nothing else you typed is lost.

1 Open the application

/apply

Fill in your name, an email, and a password of at least 10 characters. Add a country and phone number. Tick the box to accept the terms — the form will not continue without it.

You should see: the heading changes to *Your service*, and the progress dots move to step 2 of 7.

2 Pick the service, then the specialties

Step 2 of 7 – *Your service*, then *Your specialties*

Choose the one service you mainly do, from the ten. Continue, and the next screen offers the specialties **for that service only**. If something you do is not listed, type it into the "add your own" field.

You should see: only specialties belonging to the service you picked — not all ten services' worth.

3 Skills and tools

Step 3 of 7 – *Skills & tools*

Tick the software and skills you use. As in step 2, you can type in anything that is missing. If you chose **Website Development**, this step first asks which role you do, then shows only the tools that match that role.

You should see: a shorter, relevant list — not every tool in the industry.

4 Professional profile

Step 4 of 7 – *Professional profile*

A short headline, a longer description of your experience, years of experience, and where you are based. This is what a company reads first.

5 Portfolio

Step 5 of 7 – *Portfolio*

Add at least one piece of work: a title, a link to it, and a note on what you actually did. One is enough to continue.

You should see: the step accepts a link on its own. File uploads are deliberately switched off, so there is no upload box.

6 Rates and preferences

Step 6 of 7 – *Rates & preferences*

Your rate range and currency, how you prefer to charge, how available you are, and the project sizes that suit you.

7 Send it for review

Step 7 of 7 – *Submit for review*

Read the summary of everything you entered, then submit.

You should see: a confirmation that the application is with the team. Your profile is **not** public yet — that happens in Part 2.

Worth trying while you are here

- Go **Back** a step and check nothing you typed has been lost.
- Submit a step with a required field empty — the message should appear next to that field, in plain English, and everything else should stay filled in.
- Open `/workspace/freelancer`. It should say your profile is waiting for review.

Part 2 · Approve them as the admin

YOU ARE THE ADMIN

1 Switch to the admin

Sign out, then `/sign-in`

Sign in with `admin@fashionfreelancing.com / ff-admin-review-2026`.

You should see: you land on the operations page automatically.

2 Open the operations page

`/workspace/admin`

Find **Freelancer applications**. The person you just created is there. Open their card and read what they submitted.

You should see: everything from all seven steps — services, skills, profile, portfolio, rates.

3 Approve them

`/workspace/admin – Freelancer applications`

Click **Approve**. There are also **Needs changes**, **Reject** and **Pause** if you want to see what those do — try them on a second test freelancer rather than this one.

You should see: they move out of the queue and into **Live specialists**, and they now have a public web address of their own.

4 Clear the other queues

`/workspace/admin`

If you typed your own specialty or tool in steps 2–3, it is waiting under **Custom skills & tools awaiting normalization**. Approve it. Your portfolio piece may be under **Portfolio awaiting moderation** — approve that too.

5 Check they are now public

`/specialists`

Open the directory.

You should see: your freelancer listed. Click through to their profile. Their email and phone number must **not** appear anywhere on it.

Part 3 · Hire them as a company

YOU ARE THE COMPANY

1 Find them without signing in

Sign out first, then `/specialists`

Browse as a stranger would. Try the filters down the left: **Search**, **Service**, **Specialty**, **Availability**, **Experience**, **Location or timezone**, **Language** and **Budget up to**.

You should see: the list narrows as you filter, and the web address changes with it — so a filtered list can be shared or bookmarked.

2 Save them to a shortlist

`/specialists`

Click **Save** on their card while still signed out.

You should see: it saves without asking you to sign in. It is kept for you until you make an account, at which point it moves into that account.

3 Ask to work with them

Their profile → **Request to hire**

Fill in the brief: company or brand, your role, project title, service, specialty, the brief itself, deliverables, start date, deadline, budget range and currency.

You should see: when you submit, you are asked to create an account — and after you do, **the brief you typed is still there**. It is not thrown away.

4 Create the company account

`/sign-in → company setup`

Make an account with a different email from your freelancer, then give the company a name and country.

You should see: the hire request goes out in one submit, and the specialist you saved earlier is now under **Saved specialists** in your workspace.

5 Post an open project as well

`/projects/new`

Post a brief in the same service your freelancer offers. When you reach the visibility question, pick **Anyone in this service**.

You should see: once published, the site lists the specialists it matched and, for each, a line beginning *Recommended because...* explaining why.

The other two choices are **Invited only** and **Confidential**. Confidential deliberately matches nobody and notifies nobody — worth testing separately.

6 Check your workspace

/workspace/company

You should see: five sections — **Replies to your projects**, **Your projects**, **People you asked to work with**, **Saved specialists** and **Work in progress**.

Part 4 · Take the job as the freelancer

YOU ARE THE FREELANCER AGAIN

1 Switch back

Sign out, then /sign-in as your freelancer

Open /workspace/freelancer.

You should see: **Profile status** now reads approved, and the hire request from the company has arrived under **Requests to work with you** — with their company name and budget.

2 Find the project you were matched to

/projects

You should see: the open project the company posted, with the same *Recommended because...* explanation the company saw.

3 Reply to the project

/projects → **Reply to this project**

Write a short pitch, a price and a timeline, then send.

4 Ask the company a question

/workspace/freelancer → **Ask a question**

On the hire request, open **Ask a question** and send one. Then sign out, sign back in as the company, and answer it from /workspace/company. Then switch back again to read the reply.

You should see: the conversation works in both directions and each side sees the other's messages.

5 Accept the work

/workspace/freelancer → **Accept**

Accept the hire request. (**Decline** is there too, if you want to test it on a second request.)

You should see: it moves to **Work in progress** — and it appears under **Work in progress** on the company's side as well.

The final check — all three agree

Visit each of the three workspaces in turn and confirm they tell the same story: the company sees the acceptance and the project reply, the freelancer sees work in progress, and the admin page shows the approved specialist and the posted project. Nothing should contradict anything else.

Part 5 · Everything else

The four parts above cover the main journey. These are the remaining features. Tick them off in any order.

The public website

- ☐ **Home page** — /. Check the menu, the footer, and that the logo returns you home from deep inside the site.
- ☐ **The ten service pages** — /pages/services/tech-pack and the same pattern for `pattern-cad`, `3d-virtual-sampling`, `graphic-design`, `seamless-pattern`, `dobby-jacquard`, `ecom-listing`, `ai-photography`, `ai-agent`, `website`.
- ☐ **The enquiry form** on each service page — name, email, company, service, message. Send one from any service page. It should arrive under **Project enquiries** on the admin page.
- ☐ **Supporting pages** — /pages/about, /pages/help, /pages/terms, /pages/privacy, /pages/cookies.
- ☐ **A page that does not exist** — type any nonsense address and check you get a proper "not found" page, not a crash.

Signing in and account recovery

- ☐ **Wrong password** — the message should be the same whether or not the account exists, so nobody can fish for registered emails.
- ☐ **Forgotten password** — /sign-in/forgot. The reset link appears under **Queued email** on the admin page. Follow it and set a new password.
- ☐ **Confirm your email** — the confirmation link for any account you create is in that same **Queued email** list.
- ☐ **Sign out** — from any workspace. Check the workspace pages then refuse to open until you sign in again.

Pages that should refuse you

- ☐ /workspace/admin while signed in as a freelancer or company — must show "not found", not an error and not the page.
- ☐ /workspace/company while signed out — must send you to sign in, then bring you back where you were going.
- ☐ /projects while signed out — same.

The rest of the admin page

Sign in as the admin and work down /workspace/admin.

- ☐ **Project enquiries** — mark one as contacted, quoted, won or lost.
- ☐ **Custom skills & tools awaiting normalization** — approve, merge into an existing tag, or reject.
- ☐ **Portfolio awaiting moderation** — approve or reject a piece of work.
- ☐ **Live specialists** — **Feature** one and confirm they sort to the top of the directory. Then **Pause** one and confirm they disappear from it.
- ☐ **Posted projects** — **Close** a project and confirm it vanishes from the freelancer's list. Also **Recommend** a specialist to a project by hand and confirm they are told.
- ☐ **Queued email** — every message the site would have sent.

- ☐ **Recent activity** — a plain-English history. It should read like sentences, not database codes.

The parts that protect people

- ☐ **A confidential project** — post one with visibility **Confidential**. It must match nobody and notify nobody; check no freelancer sees it under /projects.
- ☐ **Contact details** — a specialist's email and phone must never appear on their public profile.
- ☐ **Your sandbox is yours** — open the site in a private/incognito window. The directory should be empty there, with none of the people you created. That window is a different tester as far as the site is concerned.

How it behaves

- ☐ **On a phone** — open the site on a real phone, or narrow the browser window. Check the menu, the application form and the workspaces.
- ☐ **Text size** — nothing should be too small to read, and tapping a tick box should not zoom the page in.
- ☐ **Going back** — use the browser's back button mid-application. Nothing you typed should be lost.
- ☐ **Refreshing** — reload after submitting a form. It should not send the same thing twice.

If something looks wrong

Note these four things and it can usually be fixed without asking you anything further:

1. The web address you were on.
2. Which of the three people you were signed in as.
3. What you expected, and what happened instead.
4. A screenshot, if the problem is something you can see.

Please do not report as bugs: an empty directory before you have approved anyone, emails that never arrive in a real inbox, or not being able to upload a file to a portfolio. All three are deliberate and explained earlier in this guide.
